RTLOLA IN A NUTSHELL

input lat, lon, velo: **Float64**

The GPS module operates with at least 5Hz.

RTLOLA IN A NUTSHELL

input lat, lon, velo: **Float64**

output gps_freq **@1Hz** := lat.aggregate(over_exactly: 1s, using: count)
trigger gps_freq < 5 “GPS frequency less than 5 Hz.”

RTLOLA IN A NUTSHELL

input lat, lon, velo: **Float64**

output gps_freq **@1Hz** := lat.aggregate(over_exactly: 1s, using: count)
trigger gps_freq < 5 “GPS frequency less than 5 Hz.”

Measured and computed velocities coincide.

RTLOLA IN A NUTSHELL

input lat, lon, velo: **Float64**

output gps_freq **@1Hz** := lat.aggregate(over_exactly: 1s, using: count)

trigger gps_freq < 5 “GPS frequency less than 5 Hz.”

output gps_dist := sqrt($\delta(\text{lon})^2 + \delta(\text{lat})^2$)

output gps_velo := $\nabla(\text{gps_dist})$

trigger abs(gps_velo - velo) > 0.1 “Conflicting measurements for velocity.”

RTLOLA IN A NUTSHELL

input lat, lon, velo: **Float64**

output gps_freq **@1Hz** := lat.aggregate(over_exactly: 1s, using: count)

trigger gps_freq < 5 “GPS frequency less than 5 Hz.”

output gps_dist := sqrt($\delta(\text{lon})^2 + \delta(\text{lat})^2$)

output gps_velo := $\nabla(\text{gps_dist})$

trigger abs(gps_velo - velo) > 0.1 “Conflicting measurements for velocity.”

Deceleration is preceded by a slow-down command.

RTLOLA IN A NUTSHELL

input lat, lon, velo: **Float64**

input slow_down_cmd: **Bool**

output gps_freq @1Hz := lat.aggregate(over_exactly: 1s, using: count)

trigger gps_freq < 5 “GPS frequency less than 5 Hz.”

output gps_dist := sqrt($\delta(\text{lon})^2 + \delta(\text{lat})^2$)

output gps_velo := $\nabla(\text{gps_dist})$

trigger abs(gps_velo - velo) > 0.1 “Conflicting measurements for velocity.”

output fast := velo > 700

output slow_down := fast.offset(by: -1).defaults(to: false) \wedge \neg fast

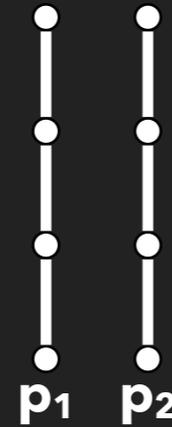

trigger @1Hz \neg slow_down_cmd.aggregate(over: 5s, using: \exists)

\wedge slow_down.hold().defaults(to: false) “Spurious Slow-Down.”

CHALLENGES

**Periodic
versus
Event-Based**

**Utilize
Parallel
Execution**

**Reduce
Circuit
Cost**

PERIODIC V. EVENT-BASED

input lat, lon, velo: **Float64**

input slow_down_cmd: **Bool**

output gps_freq **@1Hz** := lat.aggregate(over_exactly: 1s, using: count)

trigger gps_freq < 5 “GPS frequency less than 5 Hz.”

output gps_dist := sqrt($\delta(\text{lon})^2 + \delta(\text{lat})^2$)

output gps_velo := $\nabla(\text{gps_dist})$

trigger abs(gps_velo - velo) > 0.1 “Conflicting measurements for velocity.”

...

PERIODIC V. EVENT-BASED

input lat, lon, velo: **Float64**

input slow_down_cmd: **Bool**

output **gps_freq @1Hz** := lat.aggregate(over_exactly: 1s, using: count)

trigger **gps_freq < 5** “GPS frequency less than 5 Hz.”

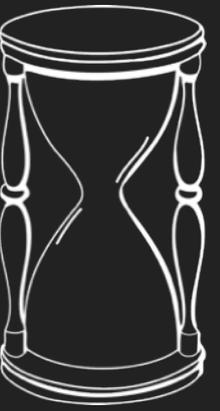

output **gps_dist** := sqrt($\delta(\text{lon})^2 + \delta(\text{lat})^2$)

output **gps_velo** := $\nabla(\text{gps_dist})$

trigger **abs(gps_velo - velo) > 0.1** “Conflicting measurements for velocity.”

...

PERIODIC V. EVENT-BASED

input lat, lon, velo: **Float64**

input slow_down_cmd: **Bool**

output **gps_freq @1Hz** := lat.aggregate(over_exactly: 1s, using: count)

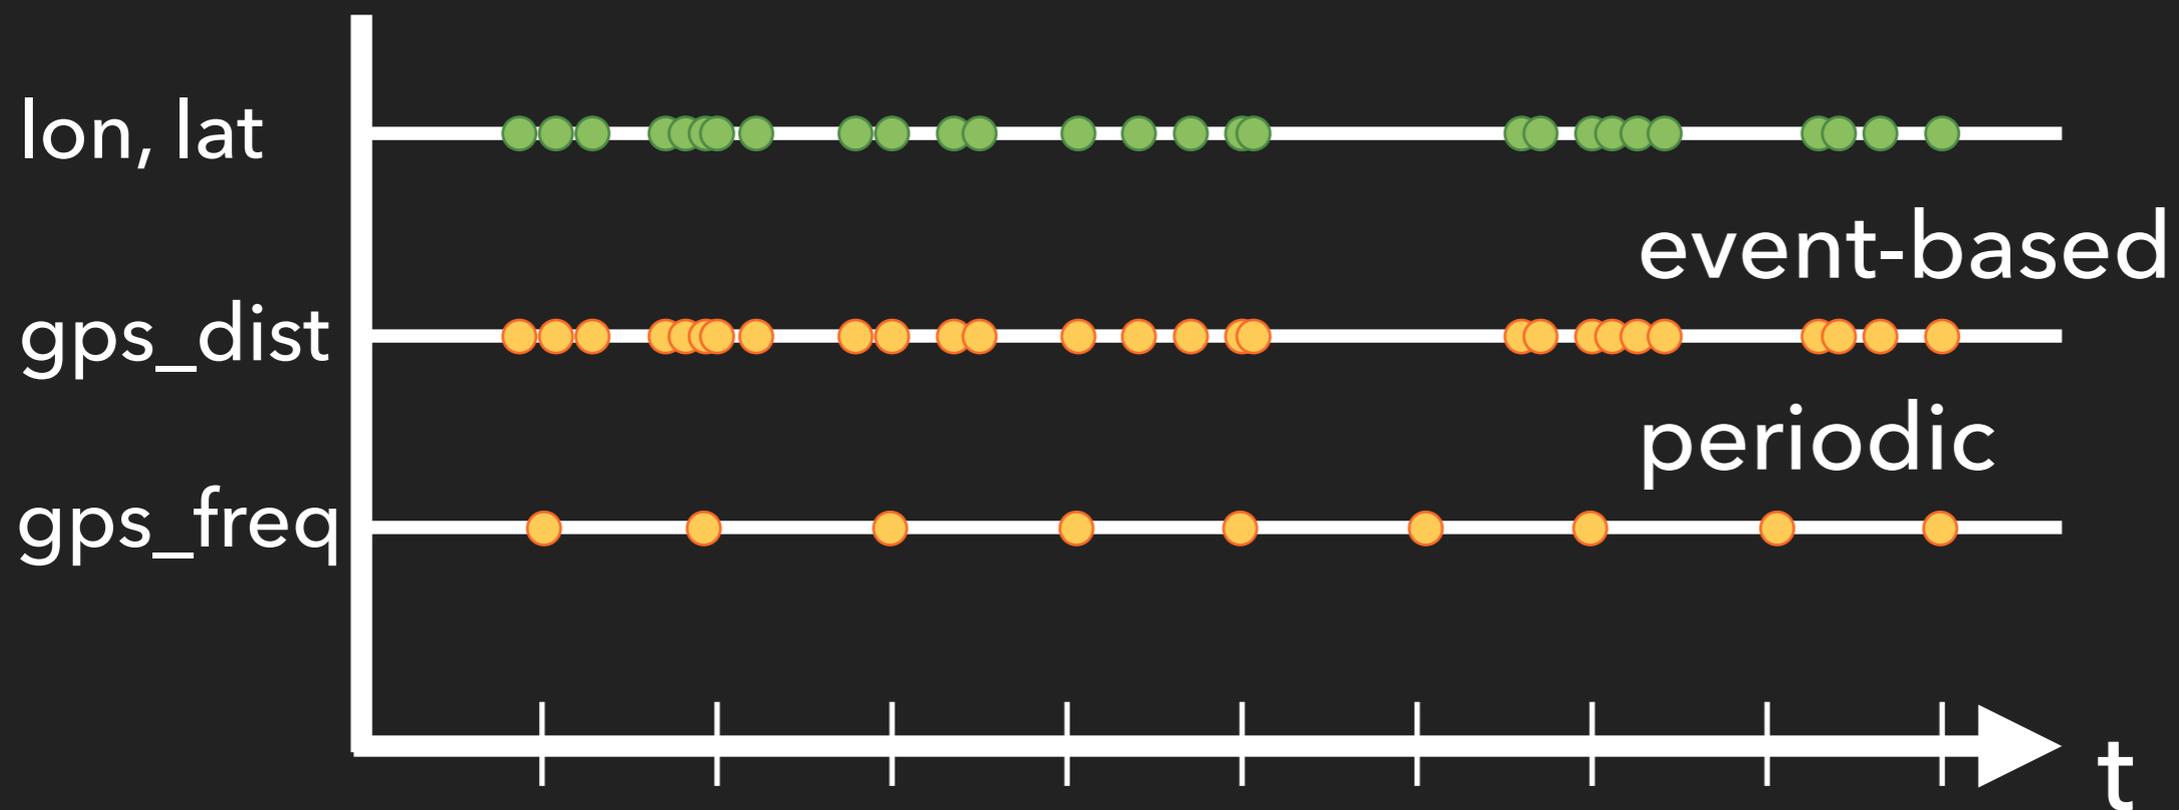

trigger **gps_freq < 5** “GPS frequency less than 5 Hz.”

output **gps_dist** := sqrt($\delta(\text{lon})^2 + \delta(\text{lat})^2$)

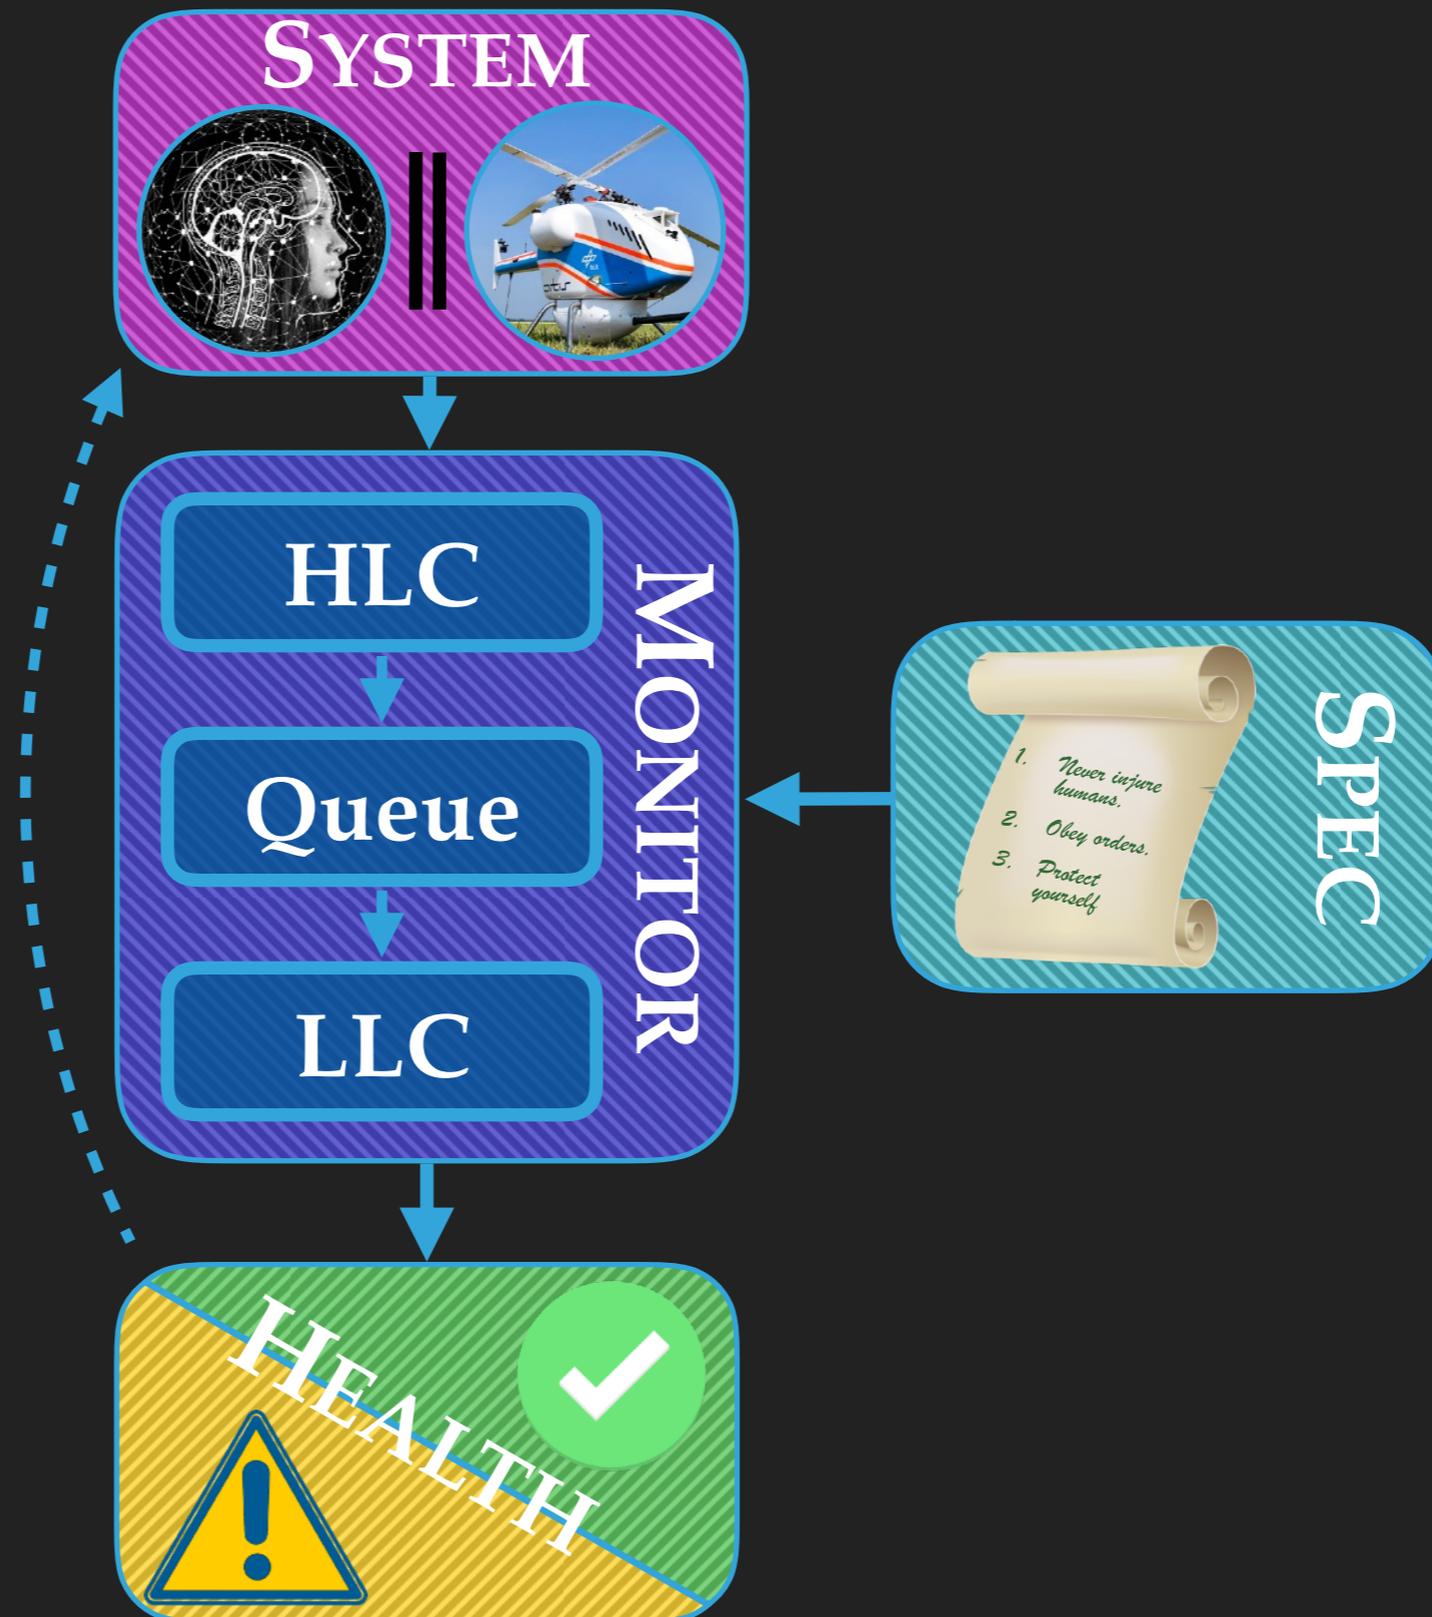

output **gps_velo** := $\nabla(\text{gps_dist})$

trigger **abs(gps_velo - velo) > 0.1** “Conflicting measurements for velocity.”
